Suffering from Allergy?

Don't wait...get tested scientifically. Because allergies are not just a nuisance – they are a serious health issue. Allergies can interfere with day-to-day activities and impact quality of life.

Following is the list of Allergy causing elements :

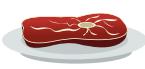

What is Allergy:

Allergy is a condition, in which the immune system reacts abnormally or profoundly to a foreign substance(allergens) entering the body. The causes of allergy are sensitivity to various environmental factors like -pollen, dust, and spores and food factors. Other causes of allergies include bee stings and drug-related allergies.

Food Veg Allergens (114)

Fruits		Apple Banana Grapes	Guava Kiwi & Pear Mango	Melon Orange Papaya	Pineapple Strawberry Peach	Pomegranate Lychee Watermelon

If the symptoms still persist,
the clinicians are recommended to
also test for the
Food Intolerance Panel
to help in accurate diagnosis of
the patient.
